NOTES:
The following pamphlets are available from the Porters’ Lodge/Student Post Room/Moodle
A. CAMCYCLE: WELCOME TO CYCLING IN CAMBRIDGE
B. CAMCYCLE: CYCLE LIGHTING
I. INTRODUCTION
Please read this booklet carefully. It contains essential information which will help you take care of your own health and safety and that of others affected by you.
Emmanuel College recognises a duty to ensure, as far as is possible, the health and safety and welfare of all those who live and work in the college, whether as Fellows, staff or students. This booklet has been prepared with the intention of supplying essential information and advice for the benefit of all students of the college. It is hoped that it will assist all in meeting their own responsibility to take reasonable care for their own health and safety and for that of others affected by their work or behaviour. Further advice and information can be obtained from the college Health & Safety Officer. If you have any concerns which are not addressed in this booklet you can also discuss them with the Bursar, Catherine Webb.

COLLEGE HEALTH & SAFETY OFFICER
For any Fire, Health & Safety matters, please contact David Hobbs.
He can be contacted via phone: 01223 334223 or via email: fhs@emma.cam.ac.uk

II. ELECTRICAL APPARATUS AND SAFETY
a. RESPONSIBILITY
The ultimate responsibility for the safety of personal electrical equipment rests with you, the owner (i.e. the student). You must ensure that you have read the instructions provided by the manufacturer, and comply with those instructions.

b. APPLIANCES
All electrical appliances which you bring to the college must be manufactured to the appropriate British (BS) or European (EU) Standard and must be sound, undamaged and wired with earthing connections unless double insulated.

No alterations may be made in the electrical fittings of college rooms except by members of the maintenance staff or by those who have been authorised by the college. Electrical household appliances other than those approved in section 24 of the college Regulations are not allowed and in particular additional heating devices may not be introduced into college rooms unless they have been inspected by the college electrician.

Electrical equipment which is old or defective can be dangerous. You must therefore ensure that any electrical equipment that you bring to the college is safe. If you are uncertain of the safety of any item of electrical equipment which you bring to college, you should apply to the Buildings Manager, who will arrange for the college maintenance staff to inspect and test it free of charge.

The Buildings Manager is David Hobbs and his office is located at the top of A staircase, Front Court (Tel: 334223). Particular care must be taken to avoid overloading the electrical supply system. While you, as a college resident, are responsible for the safety of your own electrical equipment, you also have a duty to report immediately any unsafe wiring or equipment which you may notice. The use of 3-way adapters is not allowed. Multi-gang sockets only may be used and can be purchased nearby at John Lewis. Only equipment or appliances with British (BS) or European (CE) marked labelling, leads and plugs shall be permitted for use within the college.

Equipment, appliances, adaptors or transformers brought from outside the UK or Europe are not permitted and will be removed. Please note 3D printers are not permitted in college rooms.

c. FLEXIBLE LEADS
All trailing leads must be in good condition with undamaged insulation and termination in a standard 3 pin plug, appropriately fused for the loading of the apparatus or appliance attached. The PVC insulation surrounding the conductors of flexible leads must comply with standard colour codes. Live: brown, Neutral: blue, Earth: yellow/green. The outer protective sheath must also be in good condition.
d. EXTENSION LEADS
These must be of sound construction, free of kinks, and of adequate current capacity for intended loads. Cable reel extension leads and 3-way adaptors are not allowed.

e. WIRING OF PLUGS
Almost all appliances and electrical items are now supplied with plugs fitted with the appropriate fuse. It is unusual for these fuses to blow, and therefore if it does happen you should report the fact on the online maintenance log, so that the plug and appliance can be checked. No-one other than the college electricians should undo an electrical plug. If you use equipment that does not comply with these instructions, it will be removed and made the subject of a report to the Bursar and Senior Tutor.

f. CHANGING LIGHTBULBS
If you have a faulty light bulb place an entry on the online maintenance log on the college website.

III. GAS
At the slightest suspicion of a gas leak, turn off any gas-fed appliance and the main supply valve to your residence, do not use electrical switches, open all windows and doors and then, inform the Porters’ Lodge and the maintenance department at once during normal working hours, and Transco on 0800 111 999 at other times. However, do not hesitate to ring Transco in the first instance if there is the slightest difficulty, and then immediately inform the Porters’ Lodge and the maintenance department.

IV. GENERAL ACCIDENT PROCEDURES
Everybody has a duty to take reasonable care for their own health and safety. Most accidents which occur within the college are the result of inappropriate behaviour, and are therefore preventable. In the event of a person being injured as the result of an accident, make sure they are attended to by a doctor, trained nurse or a first-aider as soon as possible.
If medical aid is needed urgently, send for an ambulance by dialling 999, 1-999 from a college telephone extension, or through the Porters’ Lodge (334200). Remember to tell the ambulance staff exactly where to come and be there to receive them; remember to tell them what has happened and how many people are hurt. You must inform the Porters’ Lodge if you call an ambulance as the ambulance cannot get on site without the Porters’ assistance.
In the event of a suspected cardiac arrest, choking event, electrocution, fall from height etc., immediately summon the Porters’ Lodge to attend with the defibrillator.

FIRST-AIDERS
All porters are trained in First Aid and Mental Health First Aid, and they can provide a list of qualified first-aiders in college (Tel: 334200). There will not necessarily be a qualified first aider present where an accident occurs (particularly if the accident occurs outside of working hours). First aid boxes are kept in the Porters’ Lodge, the Sick Bay, the Sportsground pavilion, the Boathouse, and are also kept by each Head of Department in their office (accessible only during working hours).
If you are a qualified first-aider, please inform the Head Porter, who maintains a list of current holders across the college portfolio.

V. REPORTING OF ACCIDENTS AND ‘NEAR MISS’ EVENTS
• Accident: an unplanned, unwanted event which results in injury
• Near miss: an unplanned, unwanted event which has the potential to result in injury

Every accident or near miss that occurs on college property should be reported by either the person concerned, the attending first aider or another witness. Staff shall report any such incident
via the online reporting system and inform their Head of Department. Students are to report to the Porters’ Lodge where the incident will be recorded in the college accident book. This will then be used as the basis for an investigation by the college Health & Safety Officer. All information contained on the form is confidential. The reporting of accidents, or near miss events can help identify areas of risk within the college, and protect the interest of individuals who may be injured as a result of an event. Recording of events allows the college to comply with the Health & Safety at Work Act 1974 and the Reporting of Injuries, Diseases & Dangerous Occurrences Regulation.

VI. GENERAL HEALTH

a. ILLNESS IN COLLEGE

Your Tutor should be kept informed about the general state of your health and you will have completed a form providing health information to your Tutor before coming up to college. This information is handled by your Tutor personally and is regarded as completely confidential. It will not be divulged to any other party, apart from the Senior Tutor, without your permission. If you have had any problems such as epilepsy, asthma, allergies or anything else which could cause you difficulty while you are at Cambridge it is recommended that you keep your Tutor informed.

On arrival at Cambridge, you will have registered with a local medical practitioner. Before matriculating, you will have informed the College Registrar of the name of your doctor in Cambridge on the form provided to you by your Tutor. You must ensure that the college is kept informed of any changes to these arrangements.

The college has a nurse who undertakes minor treatment or medical advice, and it maintains a small emergency Sick Bay. The times of regular surgeries during the Normal Period of Residence are posted in the Porters’ Lodge. You are encouraged to consult your own doctor when the need arises and in cases of serious illness or incapacity GPs will visit students in their rooms. Requests for visits should be made as early in the day as possible. Requests for night calls should only be made if absolutely necessary; the Porters should be notified if a doctor is called to the college at night. Undergraduates who become seriously ill are referred to the local general hospital.

If you are confined to your room by illness of any kind, you must inform the Porters’ Lodge of this. A friend or neighbour should be asked to take a message to the Porters’ Lodge. This will ensure that the College Nurse is informed. If for any reason you remain overnight in hospital while you are in residence at college, please ensure that your Tutor is informed as soon as possible.

b. HIV

The Cambridge University Students Union (CUSU) will have issued every student with welfare information about HIV and other aspects of sexual health. You are strongly advised to read it. Additional advice is available from DHIVERSE: www.dhiverse.org.uk

HIV (Human Immunodeficiency Virus) is not transmitted from person to person during normal day-to-day activities. The major risks of transmission are through oral, vaginal or anal intercourse without using a dental dam, condom or femidom, through contaminated blood entering a person’s bloodstream, through the use of shared equipment when injecting drugs and from perinatal transmission. Medical evidence shows that there is no risk of transmission from everyday contact with the public.

Revelation of HIV status is entirely at the discretion of the individual concerned. As with any medical condition, all information regarding the HIV or advanced HIV status of an individual will be treated in strict confidence. People living with HIV can lead a full and healthy life, but when they have HIV they have to make some choices and accept some responsibility to protect their own health, and the health of others. It is strongly recommended to talk to your sexual partner about
your HIV status. People living with HIV should always use a condom with water-based lubricant when having sex. If you have unsafe sex or a condom breaks, there is special treatment that may lower the risk of your partner getting HIV. This treatment is called post-exposure prophylaxis or PEP, and it must be taken as soon as possible within 72 hours of having sex. It is not a ‘morning after pill’ for HIV, and it’s not guaranteed to work. There may also be an option for your regular partner to take a special treatment called pre-exposure prophylaxis (PrEP). This is not the same as PEP. You should talk to your HIV doctor about whether this option will work for your partner and your situation.

The college has the right to expect that its members will behave responsibly towards one another, and that any student who knows that they are living with HIV will behave responsibly to avoid potential transmission to others. No person has a right to know about the presence of a person living with HIV within the college. The college, however, reserves the right to inform a person who is clearly being placed at risk of acquiring HIV by the actions of another individual living with HIV.

c. HEPATITIS

Hepatitis (inflammation of the liver) is most commonly caused by viral infection, but may also be due to certain drugs, chemicals or poisons. The condition may be either acute or chronic. There are five main strains of hepatitis, but hepatitis B is the most virulent and environmentally stable.

Hepatitis B is caused by viral infection. The virus is mainly transmitted sexually, or by the accidental inoculation of contaminated blood. The chances of getting hepatitis B can be reduced in the same way that the risk of contracting HIV can be minimised by the use of a condom during sexual intercourse, by not sharing needles and by avoiding activities such as tattooing, unless the equipment is sterile. Vaccines against hepatitis B are currently available, but are generally recommended only to people who are at high risk of infection, such as individuals travelling to a high-risk country—you may have to pay for a hepatitis B vaccine for travel, you have liver or kidney disease, you have HIV or your job puts you at risk of infection—for example, you’re a healthcare worker or work in a prison.

d. MENINGITIS

Meningitis means inflammation of the meninges (the lining of the brain). It can be caused by several different bacteria and viruses. Bacterial meningitis has received a great deal of media exposure in recent years, particularly in response to out-breaks in UK Universities. There are about 2,500 to 3,000 reported cases each year, and because the symptoms closely resemble those of the flu or a hangover, students are perceived to be high risk group. The disease can develop quickly and for this reason recognising the symptoms early is vital.

If bacterial meningitis is diagnosed early and treated quickly, most people make a full recovery. However, if left, it can lead to deafness, brain damage or even death. The illness may take over one or two days to develop, but it can develop quickly and sometimes the patient can become seriously ill in a few hours.

These symptoms may not all appear at the same time:

- being sick
- very high temperature
- violent or severe headache
- stiff neck
- disliking bright lights
- drowsiness or lack of energy
- painful joints
- seizures
Some bacteria which cause meningitis can also cause septicaemia (blood poisoning) either before or at the same time as infecting the brain lining. Septicaemia can also develop quickly. With meningococcal septicaemia a rash forms beneath the skin. The rash starts as a cluster of tiny blood spots, which look like pin pricks. If they are not treated they get bigger and look like fresh bruises with obvious bleeding beneath the skin. The rash can be anywhere on the body - even behind the ears or on the soles of the feet. It will be more difficult to see the rash on people with dark skin. The spots or bruises do not turn white when they are pressed.

Call a doctor immediately if someone has this rash.

If you think someone has meningitis:
- Contact your doctor immediately.
- Explain why you are concerned, describe the symptoms carefully and ask for advice.
- If your doctor is not available, go straight to the nearest casualty department: Insist on seeing someone.

The National Meningitis Trust advises “DON’T DUCK THE ISSUE, MENINGITIS CAN KILL: FAST ACTION SAVES LIVES”

e. DRUGS & DRINK

If you are suffering physically or mentally from a drink or drug addiction seek advice as soon as possible. In college, your Tutor, the Dean (Tel: 334264), and the College Counsellor (Tel: 330491) will give help or advice in confidence.

Additionally, or alternatively, confidential advice is also available from your Cambridge GP or the University Counselling Service at 2-3 Bene’t Place, Lensfield Road, Tel: 332865. Further sources of help and advice are set out below.

ALCOHOL

The college’s alcohol policy is set out here. It is intended to advise you of the potential dangers of the abuse of alcohol, to establish some guidelines for its safe use, and to encourage a culture of self-regulation and a respect and care for others and one self. The information provided here is intended to help you make sensible decisions about whether to drink alcohol and how much to drink.

ALCOHOL IS A DRUG, ALBEIT A LEGAL ONE.

Alcohol abuse is a growing social problem nationwide, one which is of particular concern among younger age groups.

KEEP TO SENSIBLE DRINKING LIMITS AND AVOID DAMAGING YOUR HEALTH.

The sensible limit recommended by the Health Education Authority is up to 14 units a week for both men and women, with one or two drink free days each week (a unit is measured as a half pint of ordinary beer, lager or cider, OR a single measure of spirits, OR a small glass of wine, OR a measure of vermouth or aperitif).

Some useful information on the amount of alcohol in commercial drinks can be found at [www.drinkaware.co.uk/?gclid=CKbTn8e6ktlCFUqx7QodjlcBMA](http://www.drinkaware.co.uk/?gclid=CKbTn8e6ktlCFUqx7QodjlcBMA). The concentration of alcohol in the body, and therefore its effect on you, depends on how much you drink, whether your stomach is empty or not, your height, weight, age and sex. If you’re smaller or lighter than average, or young, and if you’re not used to drinking, you will be more easily affected by alcohol.

The effects of alcohol can start within ten minutes and depending on the individual can last for...
many hours. Slurred speech, vomiting, loss of balance, and distorted vision are just some of the more immediate effects of drinking on the body if you consume too much alcohol at once; so is unconsciousness.

**VERY HIGH AMOUNTS CONSUMED RAPIDLY CAN LEAD TO ALCOHOL POISONING, WHICH CAN BE FATAL, AS CAN THE COMBINATION OF UNCONSCIOUSNESS AND VOMITING.**

Long-term use is linked to liver disease, heart disease, brain damage, some cancers and several disorders of the reproductive system and sexual organs.

You should think about the effects that drinking has on your body and your mental state. Some students chose not to drink alcohol at all; many others drink safely without any problems or impact on their studies – but not all.

There are times when even one or two alcoholic drinks can be too much, for example:

- Don’t drink if you are pregnant
- Don’t drink before or when driving or cycling
- Don’t drink before or when operating machinery or equipment
- Don’t drink before or when using electrical equipment
- Don’t drink before or when swimming or taking part in active sport
- Don’t drink before or when taking certain medicines
- Don’t drink if a doctor advises you to drink less or not at all

Remember that it is possible to remain under the influence of alcohol the morning after a heavy drinking bout. Take 48 hours without drinking to allow your system to recover.

Researchers define ‘binge drinking’ as having at least 6 units in one session for women and 8 units in one session for men. Binge drinking all 14 units (the sensible limit recommended for a week) at once is bad for your health and potentially very dangerous.

National statistics indicate that the prevalence of hazardous drinking in the 16–24 age group is over 50% for men and 30% for women—the highest prevalence for any age group. In common with many university towns, the local NHS has expressed concern about the level of alcohol related admissions to Addenbrooke’s Hospital.

Alcohol is an addictive drug and there is strong evidence that abuse of alcohol and alcohol dependency may stem from drinking in order to relieve stress, anxiety and depressive thoughts, all of which are not uncommon and for all which help is available.

Alcohol is a depressant, and can exacerbate pre-existing depressive conditions as well as precipitate them.

**ALCOHOL IS A MAJOR CAUSE OF ACCIDENTS**

Alcohol affects your judgement, self-control and co-ordination, so it will increase your chances of having an accident, or may make you take unnecessary risks or act in a way you might not otherwise have done, for example, taking part in higher risk sexual activity.

**DRINKING ALCOHOL AFFECTS YOUR PERSONAL SAFETY**

An estimated 23,000 alcohol-related incidents take place in Britain each week. Being on the streets under the influence of drink puts you at greater risk of physical and sexual assault. For safety when you have been drinking alcohol: stay with friends, look out for your friends, don’t walk back to College alone at night, and take extra care on night time roads. You should also be alert to the risk of drink spiking.
ANTISOCIAL BEHAVIOUR

Antisocial behaviour is often associated with excessive drinking. Although alcohol is a depressant it can exaggerate whatever mood you are in when you start drinking. When drunk, you may unwittingly seem more threatening to others, influencing how they react to you. Avoiding violence when not fully in control of yourself can be difficult; your perceptions will be dulled, it will take you longer to react and think things through, and your judgement may be affected. Aim to talk your way out of a situation, avoiding aggressive language, and using open body language. But always bear in mind that when you have been drinking you will be more vulnerable to difficulties and danger then when sober.

ALCOHOL WITHIN THE COLLEGE COMMUNITY

The college wants to encourage students who choose to use alcohol to use it carefully, and safely, and not to abuse it. It is both foolish and dangerous to encourage others to drink more than they ought or wish. A social emphasis on alcohol can be insensitive to students whose cultures do not endorse the use of alcohol and to those who choose not to use it.

Encouraging excessive alcohol consumption is not compatible with sensible drinking and drinking games in particular are not permitted in the college bars, the Hall, or in any licenced premises within the college.

Excessive quantities of alcohol must not be provided at events and those organising events have a responsibility to promote sensible drinking. The National Union of Students runs an alcohol awareness campaign which provides useful advice. When organising events, you should make sure that good quality alcohol free alternative drinks are available.

DISCIPLINARY MATTERS

Anti-social behaviour, which is often a consequence of excess drink, is not tolerated by the college and may be treated as a disciplinary matter. A person whose behaviour is so affected by drinking as to make others feel threatened may be in breach of the college’s disciplinary rules.

Anyone who damages property, harms another person or engages in anti-social behaviour or harassment in any form may face disciplinary consequences. Anyone who encourages another to consume alcohol to the point of drunkenness or beyond may also face disciplinary consequences.

Drunkenness is not a defence in the event of disciplinary action and it cannot be regarded as a mitigating circumstance.

HELP AND ADVICE

If your drinking habits are affecting your life and studying, and you need help with the issues underlying your drinking, or if you know somebody in that situation, the following are sources of advice and assistance:

- Your Tutor
- College nurse
- Dean (Tel: 334264)
- College Counsellor (Tel: 330491)
- Cambridge GP
- University Counselling Service at 2-3 Bene't Place, Lensfield Road, (Tel: 332865)
- www.drinkaware.co.uk
- Alcoholic Anonymous: www.alcoholics-anonymous.org.uk
DRUG MISUSE

It is dangerous to take drugs other than under medical direction. If you are suffering either physically or mentally from drug taking you should seek early advice. Your Tutor is available to give personal advice, and confidential advice can also be obtained from your GP or from the University Counselling Service. Further sources of help and advice are set out below.

THE LAW

The possession and supply of controlled drugs (Drug Classes A, B and C) are criminal offences. Examples of drugs in the three classes include:

- **Class A:** cocaine (including crack), heroin, amphetamines when injected, crystal meth, ecstasy (MDMA), LSD, magic mushrooms
- **Class B:** amphetamines, ketamine, cannabis, Ritalin, pholcodine (opioid cough suppressant), mephedrone
- **Class C:** Valium (and other benzodiazepines), GHB, Tramadol

Following the introduction of the Psychoactive Substances Act 2016, which deals with so called ‘legal highs’, it is a criminal offence to produce, supply, offer to supply, and to possess with intent to supply certain psychoactive substances which are proscribed under the act.

The college is required to inform the police in cases of possession of class a drugs or cases of dealing involving any controlled drugs. The consequences can be very severe and long-lasting if a student is charged and convicted of a drugs offence, since they will have a criminal record. The college may also invoke its own disciplinary procedures in any case of drug misuse.

MISUSE OF DRUGS AND HEALTH

The college will seek to provide medical and counselling support for any student involved with or concerned about drugs or drug taking, whether the drugs are illegal or legal. Your Tutor, the College Nurse, the College Counsellor and the Dean are always ready to give confidential advice to any student. It is most important that you understand that the persistent use and abuse of illegal or legal drugs may be associated with significant harms.

There is a growing availability of drugs about which little is known in terms of their harms. With cognitive enhancers, such as modafinil, and legal highs, such as mephedrone, the effects of repeated dosing are poorly understood. Mephedrone and other so called ‘plant foods’ are rarely pure and are linked to serious health harms, including amphetamine-like overdosing symptoms. If you purchase drugs it is impossible to know whether the drug is pure or whether it has been adulterated with some other substance. Neither is it possible to know what health harms such drugs bring after repeated dosing.

ADDICTION

No one can know whether they will become addicted to the drugs that they use, whether legal or illegal. A key sign, which may not be as easy to recognise as you think, is the gradual increase in, and progressive loss of control over, use. This loss of control is most easily recognised in smokers, who persist in smoking despite the certain risk of respiratory, lung and cardiovascular disease.

If you feel that you are using any drug (including alcohol) in a way that is difficult to control it is very important that you seek help within or outside the college at the earliest opportunity. It is possible to help people stop problem drug use at an early stage, but help is much less effective when drug use, including drinking, is out of control.

HELP AND ADVICE

In addition to support within College (listed above), help and advice is available from Frank: [www.talktofrank.com](http://www.talktofrank.com)
f. HEALTH ARRANGEMENTS FOR TRAVEL ABROAD

Students travelling abroad for holidays or on field work should consult their GP at least 8 weeks before departure in order that a vaccination programme may be started. No student should undertake travel abroad while knowingly ill or against medical advice. All students should ensure they have adequate medical insurance cover. Those travelling within the EEC should obtain an E111 form from the DHSS (Henry Giles House, 73-79 Chesterton Road, Cambridge, CB4 3BQ) before departure.

There are a number of leaflets available from the University Occupational Health Service (Fenner's, Gresham Road, Cambridge, CB1 2ES. Tel: 336597) which give full details of the medical preparations necessary for travel to various countries.

VII. THE RESIDENCE REGISTER AND EXEATS

College Regulation 2 explains why the university requires the college to keep a record of the residence of students. It is also important in terms of health and safety, that the college should have an accurate record of when you have returned to occupy your room and when you are absent from college during Term. It is important that you sign the residence register on arrival and departure, at the beginning and end of each Term. Also that you sign the exeat book (kept in the Porters’ Lodge) on leaving and returning to college, when you are to be absent from Cambridge for one night. If you are to be absent for more than one night, you must obtain an exeat signed by your Tutor.

If you plan to be away from college for shorter periods or stay elsewhere in Cambridge, please ensure that friends or neighbours are aware of this.

VIII. VISUAL DISPLAY EQUIPMENT

Visual display equipment has been blamed for a wide range of health problems. Only a very small proportion of people using them ever suffer health problems as a result. Most of the problems that do arise are not caused directly by the display equipment, but from the way in which it is used. It is important to take all possible steps to get the best from such equipment and to avoid potential health problems. Here are some specific tips:

- Move or adjust your chair and screen to find the most comfortable position for you to work. As a broad guide, your upper arms should be vertical and your forearms should be approximately horizontal. Your eyes should be at the same height as the top of the screen.
- Make sure that there is enough space underneath your desk to move your legs freely. Move any obstacles such as boxes or equipment.
- Avoid excess pressure on the backs of the legs and knees. A footrest, particularly for smaller users, may be helpful.
- Don’t sit in the same position for long periods. Make sure you change your posture as often as practicable. Some movement is desirable, but avoid repeat stretching movements. Take frequent breaks from work.
- Adjust your keyboard and screen to get a good keying and viewing angle. A space in front of the keyboard is sometimes helpful for resting the hands and wrists while not using the keyboard.
- Don’t bend your hands up or down at the wrist when using the keyboard. Try to keep a soft touch on the keys and don’t over-stretch your fingers. Good keyboard technique is important.
• Make sure that you have enough work space to take whatever documents you need. A document holder may help you to avoid frequent up and down neck movements and frequent refocusing of the eyes.
• Try different layouts of keyboard, screen and document holder to find the best arrangement for you.
• Arrange your desk and screen so that bright lights are not reflected in the screen. You shouldn’t be directly facing windows or bright lights. Adjust curtains or blinds to prevent unwanted light.
• Make sure the characters on your screen are sharply focused and can be read easily. They shouldn’t flicker or move.
• Make sure that there are no layers of dirt or finger marks on the screen.
• Use the brightness control on the screen to suit the lighting conditions in the room.

If you have problems that you think may be connected to your use of a computer or screen you are urged to seek advice. Health matters should be referred to the College Nurse (Tel: 334296) or to your GP. The Health & Safety Officer can also advise on the safe use of computer equipment.

IX. FIRE PRECAUTIONS

i. THE COLLEGE FIRE SAFETY OFFICER
Any questions or concerns about fire safety arrangements in the college should be discussed with the College Fire Safety Officer. A fire safety lecture is arranged at the beginning of Michaelmas Term and all freshers must attend that lecture. There will be fire drills for each staircase/building at the start of Michaelmas Term, and others at unspecified times.

ii. GENERAL ADVICE
BE PREPARED
• Read the fire action signs which are posted in your property
• Know the location of manually operated call points which are located on every staircase
• Know your escape route. All staircases must be kept free of obstructions and combustibles
• Know the location of fire extinguishers in your property
• Report any missing or damaged fire extinguishers or fire detectors to the Porters’ Lodge without delay
• Do not remove, tamper or disable any smoke/heat detectors
• All fire doors are clearly marked. Do not prop open or obstruct any fire door, or tamper with the self-closing mechanism. When not in use, fire doors must be kept closed

iii. COMMON CAUSES OF FIRE
ELECTRICAL:
• Overloading electrical sockets
• Faulty appliances
• Failure to switch off appliances and unplug when not in use
• Tampering with an appliance, or failing to use the correct lead, transformer or supply cable/plug

CANDLES, CHRISTMAS LIGHTS, PAPER LAMPSHADES, PLUG-IN AIR FRESHENERS, BARBECUES, LAVA LAMPS:
• Because of the fire risk involved, 3D printers, candles, Christmas lights, paper lampshades, plug-in air fresheners and lava lamps are not permitted in any college accommodation
• Barbecues are not permitted to be used on the main college site or at any college properties, including in the gardens of outside properties
CIGARETTES:
Smoking is banned in all college properties

SOLVENTS:
Flammable solvents, paints, paint removers, varnishes etc., must not be used in any college room

iv. ACTION IN THE EVENT OF A FIRE
- Sound the fire alarm
- Immediately evacuate the building
- Alert other occupants as you do so
- Shut doors and windows as you leave
- Do not stop to collect personal belongings
- Dial 999 when safe to do so
- Report the fire to the Porters’ Lodge
- Evacuate to the fire assembly point, and stay there until you are released by a porter or the fire brigade
  - Report to the porter any missing person known to have been in the building before the fire started
  - Do not attempt to extinguish a fire unless you need to do so in order to escape

v. ALARMS AND DRILLS
All fire alarms are tested weekly to ensure their serviceability. It is recommended that students attend the fire drill, carried out at the start of Term, for their building, in order that they are familiar with the sound that the alarm makes and the action to take. At irregular intervals during Term a varying number of staircases are selected for fire drills. Such drills are a fire safety requirement in law, and may happen at any time.
The operation and use of manual call points and fire extinguishers is explained by the College Fire Officer in their talk to new students when on first arrival at the college.

vi. FIRE WARDENS
Two students are appointed as fire wardens in each property or house. The role of the Fire Warden is to ensure that the fire extinguishers are in place and undamaged and to report any defects to the Porters’ Lodge or the College Fire Officer. In addition, each fire warden will ensure that in the event of a fire alarm sounding all the residents of the property or house go to the appropriate fire assembly point. You should ensure that you know who is the Fire Warden for your property or house.

vii. FIRE ASSEMBLY POINTS
In the event of a fire alarm sounding you should go to the fire assembly point which is closest to your property or house. (The location of the assembly point can be found on the fire action notice in each room).

viii. CORRIDORS AND STAIRCASES
General waste, bicycles, sports equipment, shoes, laundry, suitcases etc. should not be left in corridors or staircases as this creates a trip hazard. The Bursar has given permission for such items to be removed.
X. GENERAL HYGIENE AND FOOD SAFETY

i. SANITARY PRODUCTS
Soiled sanitary towels, tampons and used condoms are a potential source of infection and they should always be disposed of in the appropriate containers. These items should not be disposed of down the lavatory nor left in waste bins in rooms.

ii. HAND WASHING AND KITCHEN EQUIPMENT
Micro-organisms which normally inhabit the tiny cracks and crevices of the skin can never be totally removed by hand washing, but hand washing helps, and should be carried out regularly particularly after using the lavatory, before preparing food, after handling raw meat, fish or eggs, after handling refuse or if hands are obviously dirty.

Students are encouraged to keep their personal kitchen equipment clean. Accidental spillages should be cleared up as soon as they occur. In the interests of food hygiene, kitchen waste should be cleared frequently. The bins provided in gyp rooms, which must be lined, should be used and must be kept clean, and not overfilled. Please leave gyp rooms in a clean and tidy condition so that they are available to be used by other residents.

iii. SHARPS BOX
A sharps box for the safe disposal of syringes etc. is available in the Housekeeper’s Office which is located in the basement of the Hostel, and in the Porters’ Lodge. Syringes etc. must not be disposed of in waste paper bins. Consideration for the safety of bedmakers and other members of staff must be shown in the disposal of these items. If you require a sharps box to be kept in your College room, please contact the Housekeeper, Donna Bass (Tel: 334216).

iv. DISPOSAL OF BROKEN GLASS
All broken glass and other items which might cause injury if handled must be disposed of, in the special bins provided in gyp rooms. Broken glass and other items which might cause injury must not be left in waste paper bins, sinks, gyp rooms, rooms etc. Please remember that thoughtlessly discarded glass or other sharp items may cause injury to members of staff or other residents.

While it is expected that residents will clear away any broken glass, it does remain a potential hazard in gyp rooms and other areas. For this reason, it is recommended that you don’t walk around accommodation, or elsewhere in college, with bare feet.

v. ANAPHYLAXIS
An increasing number of people are vulnerable to severe, life threatening hypersensitive allergic reactions (anaphylaxis). These reactions occur rapidly, within minutes or, less often, hours of contact with the allergen and can lead to death if not treated promptly. Contact may be the result of eating the allergen but may also be through breathing it in or touching it.

Although food, especially milk, nuts and nut products, is the most common cause of anaphylaxis, there are others, including bee and wasp stings, drugs and latex. If the trigger is known, the best preventative measure is avoidance.

RECOGNITION
Symptoms can vary in severity and can include some/all of the following:

• Airway and breathing problems; swelling of the airways — lips, face and tongue, and narrowing of bronchioles in the lungs causing ‘wheezy’ rapid breathing
• Rapid loss of consciousness — usually due to lack of oxygen and circulatory failure
• Low blood pressure and fast pulse rate — can result in cardiac arrest
• Gastric symptoms — diarrhoea and/or vomiting or nausea
• Fear of ‘impending doom’ — agitation, panic, confusion
• Rash and/or red, itchy skin — in around 80% of cases

TREATMENT
• Call an ambulance immediately (tel. 999 or 112) tell the call handler that the person is suffering from anaphylaxis (pronounced ‘anna-fill-axis’)
• Advise the appropriate staff of the situation: this could include Porters, who will direct the ambulance team to the casualty

THE PORTERS’ LODGE HAVE 2 AAIS AT ALL TIMES.
• A measured dose of adrenaline (epinephrine) should be administered into the thigh muscle without delay, via an adrenaline auto-injector* (AAI)
• Ideally this injection should be given by the casualty, but if this is not possible any lay person or first-aider, with training, can legally administer the AAI
• Deaths occur when adrenaline is not administered promptly, for example, a delay in diagnosis or when adrenaline is not available
• Further injection may be administered after five minutes, if symptoms have not resolved, using other thigh if possible
• Anaphylaxis causes constriction of the narrow tubes in the airways; therefore, known asthmatics are encouraged to use their own salbutamol inhaler before, but not instead of, the AAI becoming available or after the AAI is used
• Reassure the casualty, keep them comfortable and avoid moving them unless directed by medical personnel
• Monitor the casualty and, where possible, arrange privacy
• Retain any devices used, and record timings & details of the incident for college incident report and medical staff
• The casualty must be taken to hospital in an ambulance after an AAI has been administered
• Once the casualty’s care is taken over by medical personnel, ensure follow-up of incident, as per local policies

ABOUT ADRENALINE
• Adrenaline is a naturally occurring chemical that our body produces in lower doses than that of an AAI. Adrenaline narrows blood vessels and opens the tubes in the lungs. In a life threatening emergency it is the only medicine that can help
• If you are concerned about administering a device on a casualty you do not know, take direction from medical personnel or ambulance call centre staff
• Adrenaline is quickly metabolized in the body and symptoms may reoccur or not respond to the medication
• AAIs are sometimes referred to by their brand names: EpiPen, Jext, Emerade or Anapen. All are slightly different, so please read the label and follow manufacturer’s instructions.
• Side effects can occur from adrenaline, but these are unlikely to cause harm further than that of the reaction, and therefore administration should not be delayed once a life threatening reaction has been established.

ACTION
• While students with a known risk of anaphylaxis are encouraged to take responsibility for their own safety, the Equality Act 2010 imposes a duty to make ‘reasonable adjustments’ in order to remove barriers. This affects colleges, which will need to reduce exposure of susceptible students to trigger substances

STUDENTS AND STAFF SHOULD BE ENCOURAGED TO:
• Take responsibility for managing their allergy. They should know what to avoid and what constitutes a reasonable level of risk
• Meet with the appropriate members of staff/colleagues to discuss their needs: for example the College Nurse, Tutor, the Head of Catering, Matthew Carter
  • Carry a warning card to advise of risk. These can be accessed using the link below: www.food.gov.uk/sites/default/files/media/document/allergy-chef-cards.pdf
  • Carry two AAI devices at all times, particularly those who also have allergic asthma.
  • Carry other appropriate medication and wear a medical alert or something similar to alert bystanders should an incident occur
  • Let their contacts know about their allergy and, if they are willing, show them how to use an AAI by practicing with a training device that can be ordered direct through the manufacturer or may be loaned by the College Nurse (depending on availability)
  • If appropriate, consider alerting their departments/academic staff located off their own college premises
  • It is strongly recommended that those at known risk follow the link below for updated guidance issued by the MHRA

CATERING STAFF
• Service and, where appropriate, waiting staff—both casual and permanent—should be briefed about the menu content of each setting, and should be given a contact person to handle ingredient queries
  • The Food Standards Agency retained EU law legislation requires food businesses, including colleges, to provide allergy information on food that is sold unpackaged
  • The legislation states that food containing any of the 14 allergens (or products thereof) must be declared to the consumer: cereals containing gluten, crustaceans, eggs, fish, peanuts, soybeans, milk, nuts, celery, mustard, sesame seeds, sulphur dioxide of concentrations more than 10mg/kg or 10mg/litre, lupin, molluscs

vi. USE OF COLLEGE-SUPPLIED MICROWAVES
Microwaves are supplied by the college for use in some gyp rooms. Students are not permitted to bring their own microwaves to college, or use them other than in gyp rooms. College Regulation 25 states that: “cooking in rooms other than gyp rooms is totally prohibited. Only light cooking in gyp rooms is permitted; certain equipment is permitted to be used in gyp
rooms—toasters, kettles, coffee makers, sandwich toasters, rice cookers, slow cookers, bread makers, blenders, juicers, air fryers and grilling machines. Care must be taken to ensure that cooking causes no offence or irritation to the college staff or to other members of the college.”

The following precautions will ensure that the microwave ovens are used safely:

• Read and observe the operating instructions, safety instructions and guidance on suitable cookware for use in the microwave which are displayed in the appropriate gyp rooms
• Do not use metal cookware in the microwave
• Do not use foil or foil containers
• Report any fault or malfunction with the microwave to the Head of Maintenance as soon as possible, using the website reporting system
• Do not use, or allow others to use, the microwave until the fault has been rectified
• The microwaves must not be moved from the gyp rooms, or used elsewhere in the college.
• Please leave the microwave in a clean condition so that it is available for use by other residents.
• Please leave the gyp room in good order, with dirty crockery and cooking utensils washed and cleared away so that the gyp room is available for use by other residents, and can be cleaned by the Bedmaker.

XI. SPORTS INJURIES

i. PRECAUTIONS AGAINST SPORTS INJURIES

CLOTHING AND EQUIPMENT

Most sports injuries can be prevented by using correct clothing and equipment, carefully chosen and well fitting, this includes such items as pads, headgear, correct shoes/boots, eye and gum shields.

GETTING FIT

There are two reasons for exercising outside your sport: the first is to prevent injury, and the second to improve your performance in your sport.

Exercises of this type fall into three main categories:

• Stretching exercises: to improve flexibility
• Power exercises: to increase strength and muscle bulk
• Fitness exercises: to make the body more efficient

WARM-UP

To prevent muscle injury prior to physical activity, the major muscle groups should be stretched. The positions should be held static for 45 seconds-1 minute, relaxed, and then repeated 4-5 times.

DIET

A balanced diet is ideal. If you have a specific medical condition, you should seek medical advice about adjustments that may be needed to your diet.

ii. PERSONAL INSURANCE

The college insurance does not cover personal injury and students are strongly advised to take out their own personal injury insurance policy.

iii. FIRST AID FOLLOWING SPORTS INJURIES

GENERAL

If you are injured stop playing immediately. To continue can be highly dangerous particularly if a head injury has been sustained. It is important that treatment is started as soon as possible. Basic first aid advice for untrained persons is given under General Accident Procedures at page 8 above.
LOSS OF CONSCIOUSNESS
This is usually due to a head injury, a common problem in sport, and although in most cases the player recovers completely it is always a potential life threatening situation and should be treated very seriously. Seek medical advice.

BREATHING
To maintain a clear airway should retching or vomiting occur, turn the casualty onto their side in the recovery position. Move the jaw forward so that the chin juts out. Fluid can then drain from the mouth, and the tongue will not fall to the back of the throat and choke the casualty. If the casualty has stopped breathing, from whatever cause, call immediately for an ambulance.

RICE: REST, ICE, COMPRESSION, ELEVATION
This can be applied in most sporting situations within a few minutes of injury. The sooner the treatment is started the more effective it is. Do not be tempted to finish the game after injury, in particular after any kind of head injury.

HOSPITALISATION AND OTHER MEDICAL SERVICES
Students are advised to go to the accident service at Addenbrooke’s Hospital immediately, if the injury appears to be serious. Students may of course visit their own GPs who are usually able to carry out suturing of a minor nature in their surgeries. Information about other physiotherapy services available may be obtained from the College Nurse during surgery hours. It is most important that treatment is started as soon as possible after injury.

iv. FIRST AIDERS
There will not necessarily be qualified first-aiders present on the college playing fields. First aid boxes are kept at the Sportsground pavilion and at the Boathouse, and the Groundsman and the Boatman are available during working hours to help to summon assistance.
Any student interested in becoming a qualified first-aider should see the College Health & Safety Officer, who has a note of the dates when courses are held in Cambridge.
It is advisable for all trainers, coaches or players involved regularly in sport to take a proper first aid course.

v. REPORTING OF INJURIES
All sports injuries occurring anywhere on college property should be reported in the same way as other injuries (see page 9 above).

vi. WEIGHTS AND TRAINING EQUIPMENT AT THE BOATHOUSE AND IN THE 22 PARKSIDE FITNESS SUITE.
The training room at the Boathouse and the Fitness Suite at 22 Parkside are unsupervised, and particular precautions must therefore be taken in using the equipment there. You must familiarise yourself with the instructions and guidance notes provided by the manufacturers of the equipment, which are displayed at each location, and also observe the rules laid down by the Boat Club and by the college. Please be aware that:

• The equipment at the Boathouse is for the use of members of the Emmanuel Boat Club only, and may only be used by those who have received introductory training arranged by the Boatman. You will need to sign the record kept by the Boat Club to show that you have received that training. Do not use equipment if you have not read the instructions which accompany it
• The equipment in the 22 Parkside Fitness Suite is for the use of members of the college and staff at the college only, and may only be used by those who have attended an induction session arranged by the college. You will need to sign to indicate that you will abide by the rules
laid down for the use of the facility and also provide some basic information about your health. In some cases the advice of your GP will also be required. Do not use the equipment there if you have not read the instructions which accompany it

- You need to be fit before you make use of fitness equipment. You should consider consulting your GP about your general level of fitness before making use of this equipment
- Always warm up adequately before you use the equipment
- You must not use the equipment alone. In particular, it is essential that you are accompanied if you use the loose weights at the Boathouse, and that assistance is available to you when necessary
- When using the free weights (at the Boathouse), always use the back supports provided
- You should report any faults with the equipment, or excessive wear in grips etc., to the Boatman (in respect of equipment at the Boat Club) or to the Bursar (in respect of equipment in the fitness suite at 22 Parkside) as soon as possible.
- Do not use equipment which appears faulty or which does not appear to be functioning correctly
- Be aware of the dangers of over exertion. If you feel unwell, stop using the equipment
- Guests must not be allowed to use the equipment either at the Boathouse or in the 22 Parkside Fitness Suite

XII. FAULTS AND BREAKAGES

Any faults or breakages in college rooms which have safety or security implications must be reported without delay. This can be done using the online maintenance log on the college website. The online maintenance log is reviewed daily on weekdays, and all entries are investigated, and appropriate action taken. At weekends and out of normal working hours, problems should be reported to the porter on duty (Tel: 334200).

If faults or breakages are observed on staircases or in gyp rooms, bathrooms or public areas of the college, and there are safety or security implications, these must again be reported without delay. It is important that every member of college takes responsibility for reporting a fault or breakage which has safety implications. It should not be assumed that the problem has already been reported by someone else.

The exterior lighting on the main college site, and at other college properties, performs an important safety and security function. Please report any failure of these lights so that bulbs can be replaced and necessary repairs undertaken.

XIII. SECURITY

The college has a large and relatively open site. In order to maintain the security of all resident members of the college, the following precautions should be observed:

- Ensure that doors & windows are kept locked when you leave the room
- If your room is on the ground floor the windows should be fitted with security locks. If these locks are faulty or parts are missing please report this on the online maintenance log as soon as possible. Please make use of these locks and leave them complete for the next resident
- If the door to your room is not currently fitted with a spy hole, the college will fit one on request. Contact the Bursar to arrange this.
- In outside properties, ensure that the front and back house doors are kept locked. Do not prop these doors open or leave them on the latch.
- Report any faults with doors or locks without delay. This can be done using the online maintenance log. If the problem is urgent, the fault should also be reported to the Porter on duty.
• Report any faults with lighting on staircases and communal areas or in the college gardens and grounds, using the online maintenance log.
• A stranger on your staircase should be asked politely who they are visiting and which room number they are looking for. If the answers are unsatisfactory or you are suspicious for other reasons the incident should be reported to the Porters’ Lodge without delay.
• Similar precautions should be taken at the Boathouse and the Sportsground.
• Ensure that the college gates are closed behind you and do not prop open or obstruct these gates.
• If you are concerned about the security of a staircase of a college house, contact the Porters’ Lodge immediately by telephoning 334200
• In the event of an emergency in a property outside the college site, you should telephone the appropriate emergency services directly, and inform the Porters’ Lodge as soon as possible.

There are closed circuit television cameras installed at various locations around the college, and these are connected to a recording system. The CCTV system is controlled by the Head Porter, and any questions concerning the operation of the system should be addressed to him. The CCTV system is used predominantly to assist with security at the college. In the event of any incident in the college, or damage, or potential damage to, property or equipment, the CCTV recording would be used in an attempt to identify those responsible.

If you have any concerns or comments about security—either of your room, College properties, or the college site more generally—or about the adequacy of lighting, please contact the Bursar. Equally, you can raise any concerns with ECSU or the MCR, who will ensure that the matter is discussed by the relevant College committee.

XIV. SAFETY OUTSIDE OF THE COLLEGE

i. SAFETY IN CAMBRIDGE

Cambridge is a relatively safe city. Cambridge University Students Union (CUSU) advises that your property is more at risk than you are, so you shouldn’t let fear dictate your movements, just be aware. CUSU advises that you can take sensible precautions without restricting your activities too much:

• If possible, walk home with friends
• Decide on your route home beforehand
• If possible use well-lit roads, and avoid dark shortcuts
• Walk in the middle of the pavement, away from doorways, and in the middle of the road in quiet roads at night
• If you think you’re being followed, cross the road
• Try to have enough money with you for taxis
• Keep your keys in your hand or pocket
• Above all, look confident, and as if you know where you are going

The college has an arrangement with Panther Taxis where by a return taxi to the college can be charged to your college bill. This facility is intended to ensure that you can return to the college safely, even if you do not have sufficient funds with you to meet the taxi fare. The taxi journey must return you to the main site or the outside property where you live, and you must give the taxi driver your name, show your student union card to confirm your name and college, and indicate that account number 0402 is to be charged. The telephone number for Panther Taxis is
Taxi fares should not be charged to this account under any other circumstances. You should contact the ECSU Welfare Officers or Women & Non-Binary Officer to discuss the availability of attack alarms.

ii. CYCLE SAFETY
While cycling is an easy and convenient way to get around Cambridge, the following advice should be followed.

- When possible make use of cycle lanes and cycle paths
- Riding at night without lights is illegal and dangerous. Ensure that you have your cycle lights with you and that you have spare batteries
- When cycling at night wear bright and reflective clothing
- Always obey road traffic regulations as they apply to cyclists
- Wear a cycle helmet. If you are doubtful about the fashion potential of a cycle helmet bear in mind that over half of cycling deaths are caused by head injuries
- Cycling after having consumed alcohol is dangerous
- Ensure that your bike is well maintained and inspect and test it regularly

XV. FELLOWS’ GARDEN SWIMMING POOL
Great care must be taken in the use of the swimming pool in the Fellows’ Garden. The swimming pool is unsupervised and it is dangerous to swim alone. Unaccompanied use of the pool is therefore not permitted. In order that you can summon help if there is an emergency at least one person present must be in possession of a mobile phone.

The swimming pool is shallow and diving is dangerous. The concrete rim of the pool and the grass which surrounds it can be slippery, and it is dangerous to run on the edge of the pool or the pool surrounds. The rules for the safe use of the swimming pool, which are displayed beside it and listed below must be observed.

SWIMMING POOL RULES:
1. For use by Fellows, college staff, students, and permitted guests only
2. No entry after 1900
3. No lone swimming
4. No diving
5. No running
6. No smoking or alcohol
7. No consumption of food or drink permitted
8. No photography permitted
9. Children are the responsibility of parents/guardians or other responsible persons
10. Students are permitted to bring a maximum of two guests

During the Easter Term, students in residence may use the pool from 0630-0900 and 1230-1900 daily, including Sundays. In the summer Vacation, the pool is open from 0630-0900 and 1715-1900 daily, including Sundays, until 31 August. Access or use of the swimming pool outside of these times is not permitted. Between 0900-1230, access is restricted whilst the pool is cleaned.

Students can only enter the Fellows’ Garden to gain access to the swimming pool, and only at the times set out above. The Fellows’ Garden is closed to students at all other times.
XVI. NO SMOKING POLICY
The college is a smoke-free site, and smoking is not permitted in any part of the college buildings or grounds, including, but not limited to:

• Any residential accommodation
• All gardens
• Boathouse
• All gyp rooms, bathrooms, changing rooms, toilets, TV rooms and common areas
• College bars & café
• Sportsground Pavilion
• College vehicles

Smoking includes the use of cigarettes, cigars, pipes filled with tobacco, or any other substance and any form of e-cigarette or electronic device that is used in a similar way to cigarettes.

XVII. RESPONSIBILITIES FOR HEALTH & SAFETY
Students, staff and visitors have a personal responsibility to act in a safe manner within the college grounds and properties.

The open water sources in the Paddock and Chapman’s Garden are not to be used by, or entered into, by students, staff or visitors under any circumstance. Similarly, in cold weather, no students, staff or visitors are permitted to walk on frozen surfaces under any circumstance.
